

## ACKNOWLEDGEMENTS

Figure 2.1 has been re-drawn from the original Hale and Hale model of accident causation which appeared in *Occupational Psychology* in 1970 (vol 44) and is reproduced by permission of NFER on behalf of the copyright holder.

Figure 2.2 has been re-drawn from Jean Surry's book 'Industrial accident research: a human engineering appraisal' and is reproduced in slightly modified form by permission of the author.

Figure 4.4 is reproduced from an original drawing supplied by and with the permission of the Royal Society for the Prevention of Accidents (RoSPA).

Figure 5.6 was re-drawn from the chapter by P. Slovic et al. In the book 'Societal risk assessment: how safe is safe enough?' edited by R.C. Schwing and W.A. Albers in 1982 and is reproduced by permission of the Plenum Publishing Corp and of the senior author.

Figure 5.7, the relation between judged and statistical frequencies for 41 causes of death, is from Figure 11 on p 566 in: S. Lichtenstein et al., Judged frequency of lethal events, *Journal of Experimental Psychology*, 1978 4 (6) 551-78, copyright (1978) by the American Psychological Association. Reprinted by permission of the senior author.

Figure 5.8 was re-drawn from B. Fischhoff and D. McGregor, Judged lethality, *Risk Analysis*, 1983 3 (4) 229-236, and is reproduced by permission of Plenum Publishing Corp and of the senior author.

Figure 9.5 is reprinted with permission from A.R. Cownie and J.H. Calderwood, Feedback in accident control, *Operational Research Quarterly*, 17 (1966) 253-262, Pergamon Press Ltd.

Figure 11.2 is reprinted with permission from L. Shaw and H.S. Sichel, Accident proneness, copyright (1971), Pergamon Books Ltd.
